

MSEL Inject Planning Tool - User Manual

Overview

This offline MSEL (Master Scenario Event List) Inject Planning Tool allows users to manage, edit, import, and export injects for exercise planning. The tool mimics the functionality of the Excel-based MSEL workbook but runs entirely in a web browser using local HTML and JavaScript.

It is designed for offline use by individual users and supports data persistence via local storage and file-based backups. It includes sorting, filtering, PDF export, dynamic field interaction, line number override, script management, and training data tagging to streamline the inject planning process.

System Requirements

- Any modern web browser (Chrome, Edge, Firefox)
- No internet connection required after download
- A local copy of the MSEL Tool folder

Installation Instructions

Step 1: Download the Tool

1. Open Microsoft Teams.
2. Click into the **Bullpen Coordination**.
3. Navigate to the **General** then **Files**.
4. Find the **MSEL Workbook** folder.
5. Click the ellipsis (three dots) next to the folder name and choose **Download**.
6. Save the folder to a convenient location on your local machine (e.g., Documents/MSEL_Tool).

Step 2: Extract and Run

1. If the folder is compressed (zipped), right-click and choose **Extract All**.
 2. Open the extracted folder.
 3. Double-click msel.html to open the tool in your browser.
-

Getting Started

Once msel.html is open, you'll see the main dashboard with grouped buttons for:

- **Data Controls:** Save, backup, load, clear data
- **Export Options:** PDF/Excel exports for injects and scripts
- **Planning Tools:** Add injects, create scripts, add training info
- **File Upload:** Import Excel or CSV inject lists

Below this is a live-updating table of injects. Click on any row to view or edit the data.

Main Interface Overview

Key Features

- **Interactive Table:** Lists injects with sortable columns
- **Inject Entry Form:** Opens when adding/editing injects
- **Script Editor:** Create, manage, and attach scripts
- **Training Tool:** Tag injects to specific units and goals
- **Persistent Storage:** All changes saved to your browser automatically

- **Override Auto Line Number:** Manually control row placement during sorting
 - **Real-time Sorting:** By clicking any column header
 - **Script Dropdown Integration:** Attach saved scripts directly to injects
 - **Live PDF Export:** Save injects or scripts formatted for printing
-

How to Add or Edit Injects

Adding Injects

1. Click  **Add New Inject** under Planning Tools.
2. Complete the form fields (Line#, Date, Time, Event, etc).
3. If "Line#" is blank, the system will assign one based on date/time.
4. Enable "**Override Auto Line Number**" if you want to pin an inject to a specific Line#.
5. Click **Add and Close** or **Add and New** to save.

Editing Injects

- Click on any row in the table to load it into the edit form.
 - Modify any field and click **Save** or **Save and Close**.
 - Use **Previous** / **Next** buttons to browse between injects.
-

Saving and Backup Options

Auto-Save (Local Storage)

- All data is stored in your browser's localStorage. This means you can close and reopen the tool without losing your work, provided you're on the same computer and browser.
- No external files are needed unless you manually back up.

Manual Save

- Click  **Save Now** to immediately commit changes to local storage.

Backup (JSON)

- Use  **Save Backup** to export your injects to a .json file.
- This file includes all injects, scripts, and overrides.
- You can share or store this file for archival or migration purposes.

Restore from JSON

- Use  **Load Save** to load a .json file you previously saved.
- Your table and scripts will be restored exactly as saved.

Clear Local Data

- Click  **Clear Saved Data** to reset everything (use cautiously).
-

Importing and Exporting Data

Importing from Excel/CSV

- Click  **Import File** and select an .xlsx or .csv file.
- You will be prompted to specify the row containing column headers.
- Data will populate the inject table. Ensure clean formatting in your spreadsheet.

Exporting

-  **Export to Excel**: Generates a .xlsx file of the full inject list.
 -  **Export to MSEL PDF**: Formats each inject as a printable page.
 -  **Export Scripts to PDF**: Generates a PDF of all entered scripts.
-

Script Management

- Click  **Create Scripts** to open the script editor pane.
 - Add a script title and script body.
 - Scripts are stored in browser memory and appear in dropdowns when attaching to injects.
 - Scripts can be exported to PDF separately or as part of full inject exports.
-

Unit Training Information

- Click  **Add Unit Training Info** to begin assigning training goals.
 - Fill out unit details and training objectives.
 - These can be mapped to injects via tagging or notes.
-

Special Features

- **Override Line#:** Pins an inject to a fixed position in the table.
 - **Hidden Columns:** Tracks row number and override status without cluttering the UI.
 - **Auto Line Numbering:** If Line# is left blank, it's assigned by chronological order.
 - **Dynamic Sorting:** Columns can be reordered by clicking headers.
 - **Form Navigation:** Easily move through entries while editing using Prev/Next.
 - **Multi-Mode Adding:** Quickly add multiple injects using Add and New.
 - **Script Dropdown Sync:** Script titles are automatically available for inject assignment.
-

Table Sorting and Line Number Override

- Click any column header to sort by that column (e.g., Date, Time).
 - By default, injects are sorted by Date → Time.
 - If the "Override Auto Line Number" checkbox is selected, that inject will retain its Line#.
 - All other injects will automatically adjust their Line# around overridden rows.
-

Troubleshooting

Issue	Solution
Changes not saving	Ensure local storage is not blocked in your browser.
Injects disappeared	Load a backup or re-import from your last exported file.
Import failed	Ensure column headers are set and Excel sheet is clean (no merged cells).
Override not working	Make sure override box is checked before saving.
Missing checkboxes	Reload or refresh to reinitialize interface.
To reset completely, click Clear Saved Data and reload the page.	

Support

If you encounter issues or would like to request enhancements, contact the tool maintainer or drop a note in your team's shared channel.
